

How Globat Oil and Gas Skills transformed a Quality Assurance and Quality Control Trainee to a competent Mud Engineer.

Case Study

SUMMARY

By training with Globat Oil and Gas Skills, Benjamin Bandele achieved an ambition to acquire an in-demand oil and gas skill and to become a valuable recruit at his company. At the Globat Oil and Gas Skills training, he was exposed to:

- Highly qualified trainers with diverse experience from the world's leading exploration and production multinationals.
- A tailored syllabus to suit his unique needs.
- Effective practical sessions.
- 24/7 staff support.
- A mix of various effective and interactive training methods such as interactive in-person lectures, slide presentations, exercises and laboratory workshops.

Today, Ben is ready to take on advanced mud engineering studies and to impact on the productivity levels at Librod Energy Services Limited where he works.

Meet Ben Briefly.

Benjamin Bandele is a Mud Engineer at Librod Energy Services Limited. He was formerly a Quality Assurance and Quality Control trainee at the same company before he participated in the Globat mud engineering training course in 2019.

Ben might have been a mud engineering student at Globat, but his determination, eagerness, proactiveness and friendliness - characteristics that embody the best mud engineers - made the demanding tasks easier to bear both for Ben and his tutors at Globat oil and gas skills.

Want to talk to Ben today? You can reach him at benjamin.bandele@gmail.com.

Why Ben attended the Globat mud engineering course.

Learning a valuable oil and gas skill and improving his professional value was part of the aspirations that motivated Ben to join Librod Energy Services Limited, and to later embrace the study opportunity with Globat which his company was to sponsor.

A Snapshot of how the Training Program Went.

Having considered the features and benefits of collaborating with Globat Oil and Gas Skills on their professional development goals, hiring Globat became an inevitable choice for Librod's management.

Ben's mud engineering course lasted for a month.

"My tutors were knowledgeable, interactive and funny." He says, adding that his favourite teaching methods were the in-person lectures and the slides presentation because they were "engaging and interactive." He also lauds his tutors for their experience, teaching ability and for sharing helpful insights on how to work, survive and excel on an oil rig.

But before Globat Oil and Gas Skills could fully impress Ben, there was a little glitch that had to be fixed.

*"Attending Globat's mud engineering training has improved my chances of going to advanced mud school and added to my employability."
- Benjamin Bandele.*

A Little Hiccup - How Globat solved a technical issue.

Ben reports that some of the practical classes had to be hurried due to an issue with laboratory equipment. However, the team at Globat Oil and Gas Skills - being available 24/7 to students throughout the entire training program - offered their expertise to questions and problems that came up during the period. Although not a perfect replacement for a seamless practical session, it was gathered that the team's availability became an effective solution.

A recent partnership with Drillcem Instruments also empowers the Globat team to prevent a repeat of the problem.

Results.

Learning about mud engineering from Globat's team of experienced oil and gas professionals, some of whom still have working relationships with exploration multinationals across the world, has qualified Ben for advanced mud engineering training and added to his skills and efficiency levels.

"(Globat's mud engineering training has improved my chances) of going to advanced mud school", Says Ben, "And also increased my employability."

With his new knowledge, Ben can now impact positively on productivity levels at Librod, help them operate more safely and to comply with national laws and regulations. He can also make faster and better decisions, thereby adding to his company's competitive advantage.

Benefits for HR at Librod Energy Services Limited.

Ben's new mud engineering skills adds to the already highly productive workforce at Librod and allows the company to keep up with the technological and professional demands of the times while reducing costs in terms of lost productivity and underperformance.

Benefits for the Chief Financial Officer (CFO) at Librod Energy Services Limited.

With Ben on their team, Librod can see higher financial returns due to better decisions on the field, more productivity and more competitive advantage.

A continuous long-term relationship with Globat would also ease up the process of making financial forecasts and producing effective cash budgets since the relationship between training costs, other costs and sales will be well defined beforehand.

About Librod Energy Services Limited.

Librod Energy Services, established in 1994, is one of Africa's foremost brands in the energy sector.

They have constantly impacted the sector through their three divisions of oilfield solutions, engineering services and offshore support services.

About Globat Oil and Gas Skills.

Globat was established since 1981 to help individuals get employment and thrive as experts in the lucrative oil and gas sector while increasing the productivity and competitive advantage of oil and gas companies.

Globat is currently led by a team of highly qualified trainers with diverse experience from the world's leading exploration and production multinationals such as Exxon Mobil, Chevron, Total, Shell, Apache, British Petroleum, Saudi Aramco and Conoco Philips.
